Position Summary

Looking for a skilled Full Stack Software Engineer to lead the development and maintenance of the SaaS components for our no-code training and education platform. As a senior member of the engineering team, you will design and implement new features and services within our web stack, collaborate with other teams, and ensure platform scalability and security.

Strong problem-solving and communication skills, agility, and a passion for software engineering best practices are essential. The ideal candidate has experience in building and deploying complex cloud-based web applications, is persistent, and driven to make an impact.

This role reports directly to the Head of Engineering.

Enduvo Tech Stack Consists of

React, Node.js, ExpressJS, MongoDB, Docker, AWS (Lambda, S3, SES, and more), Git, GitLab CI/CD

You take Ownership of

+1 877 624 7838 | www.enduvo.com

- Leading the design and implementation of our SaaS application ecosystem, including the development of new interfaces, API endpoints and 3rd party integrations.
- Taking a data driven approach to continuously monitoring and improving our platform applications and services.
- Collaborating closely with product, design, and other teams to help refine high level requirements into concrete, actionable tasks which deliver incremental value.
- Improving our deployment pipelines and engineering processes through discovery, socialization and driving adoption of proven industry trends and best practices.
- Ensuring that security, resiliency, and quality are foundational elements in our development and delivery life cycle.

Your Qualifications

- Bachelor's degree in engineering, Computer Science, or a related discipline.
- 7 years of total experience in software engineering with 2+ years serving in a
- senior level role.
- 5+ years of experience designing and building consumer facing SaaS applications.
- 3+ years of hands-on experience with ReactJS in a production environment.
- 4+ years of back-end experience using technologies such as Node, Java, or C#
- Experience working closely with UX to implement beautiful, intuitive web interfaces.
- Experience with authentication and authorization in the cloud, including access token and secrets management, Single Sign-in, and OAuth.
- Experience building and maintaining backend API endpoints and 3rd party service integrations for large-scale production applications.
- Solid experience in design, development and implementation of highly scalable, high-volume software systems and components, and distributed client-facing web applications.
- Familiarity with Agile software development methodology and project tracking tools such as Jira with an understanding of Git, Gitflow and Git version control.

Bonus Points

- Experience integrating applications with Amazon Web Services.
- Experience deploying containerized applications using serverless cloud architectures.
- Experience developing a social network application, especially in the context of supporting product led growth strategies for networking / viral sharing of content.
- Experience with WebXR or other XR enabling tools for the web.

Why join us? Details and Company Benefits

- This is a permanent position with the ability to work remote (within the US)
- Unlimited PTO

- 7 paid holidays
- Medical, dental and vision benefits
- Participation in employee option grant program
