Position Summary

The Sr Product Manager is responsible for ensuring that the product vision is realized through excellent in execution. They report to the Head of Product, and have responsibility for the product strategy, roadmap and the ultimate product delivery.

The ideal candidate is someone who desires to get things done, is persistent, articulate, and intentional. They are a strong communicator, and they know how to build teams around a product. They are comfortable with ambiguity, and able to organize and simplify complex problematics, without sacrificing to quality. They are driven and excited to be part of a very ambitious company.

You take Ownership of:

- Developing the product strategy and roadmap for our immersive platform; driven by customer needs, contracts, business feedback, competitive landscape, and long-term objectives.
- Leading product development efforts for Enduvo across multiple systems (desktop applications and web platforms) in different languages and devices

- Defining user flows and writing requirements in conjunction with the Product Designer and Engineering team - building and iterating on the best-in-class user experience.
- Overseeing the development, testing, documentation, release, and feedback of end-to-end features of our product.
- Driving execution of the roadmap to meet success metrics with high quality and evidenced customer delight, monitoring product development and ensuring match with stakeholders' expectations and high standards.
- Making fast decisions on constraints and roadblocks to manage execution risk until the feature is delivered to users.
- Defining and tracking product success based on measurable metrics and communicating with prospective/early-stage product users to collect feedback.
- Adjusting product strategy to continually iterate and improve the platform.
- Working with Product Marketing and Sales teams to define a go-to-market plan and communicate the product vision and promise.
- Collaborating with customers, sales, marketing, and leadership to develop enhancements to the entire product pipeline.

Who we're looking for:

- Experience in building and managing B2B, customer-facing products.
- Ability to navigate through a certain level of ambiguity.
- Obsessed with understanding our users, our products, and the competitive landscape to help our product team focus on what matters most.
- You are successful at identifying, defining, prioritizing, and launching products that make a difference and create business value. You own your decisions and the outcomes you create. You are not just looking for a product manager job to grow your career. You want to be a part of our company and make an impact for our products, our users, and the way the way people communicate and learn.
- You have experience with modern product management methods like Product Lead Growth (PLG) and demonstrated success executing these strategies.
- Ability to execute in AGILE environments and balance competing priorities within a performance-driven culture.
- Experience building user-centric products that foster high user engagement.
- Great communication skills: ability to influence and inspire people; act as the facilitator for the product and development teams.
- Organized with the ability to write requirements that remove the ambiguity of the feature and can be absorbed by the development team.

Qualifications:

- 7 years of relevant experience in advanced technology management as a software product manager; on time delivery & commercialization
- 3 + years of related experience in multiverse technologies or equivalent.
- Experience designing software, marketplaces, content delivery platforms and services.
- Proven track record of product development, including shipping one or more products on large code bases that span a range of platforms and tools
- Experience with products that are based on game engines, 3D modeling and animation tools.
- Evidence driven and making decisions in an honest, transparent and consistent way - taking pride in making the complex simple.
- A growth mindset - you are honest about the unknown, you are humble to learn, you embrace challenges, welcome feedback, and believe you and others can always grow
- Energized by diversity and thinking outside of normal conventions.
- Comfortable with owning outcomes and driving your own work and super passionate about the user and their pivotal role to play in shaping our product offering.
- A strong grasp of the immersive landscape and curious about the latest developments in the technology and industry.
- Experience in fields such as, product design, programming, computer vision, OS, and game development
- Experience with AR Applications, SDK development, API development and Integration with cloud services; familiar with Oculus, VIVE and/or SteamVR platforms
- Clear understanding of DevOps, automated testing, and continuous Integration practices and their role in agile software development
- Broad understanding of software and cloud architecture, large deployment, availability, performance, and security SLAs
- Start-up or scale-up experience is a definite bonus.
- Bachelor's degree in engineering, Computer Science, Product Design or a related.
- Location: Remote with the occasional ability to travel to Chicago
